PROFESSIONAL EXPERIENCE

Streams Tech, Ltd.

August 2024 – December 2025

Associate Software Engineer

Primarily worked as a backend developer, contributed to multiple projects and RnDs such as,

- **SpendPlan:**
 - Engineered a custom type-safe RedisJSON query engine by translating LINQ expressions to JSONPath at runtime.
 - Improved query response time by introducing caching in the query custom engine.
 - Eliminated raw string queries, achieving compile-time safety and faster query development.
 - Improved maintainability significantly by refactoring legacy backend modules.
- **Flat Suite:**
 - Architected and implemented core backend features (C# .NET 8, PostgreSQL, Redis).
 - Built pluggable AWS S3/local media storage and reusable rate-limited SMS OTP service.
 - Developed Blazor Server admin panel for subscription and coupon management.
 - Prototyped AI-driven universal data importer for legacy migration using OpenAI, Deepseek, and Landing AI.

EDUCATION

Islamic University of Technology (IUT) — Gazipur, Bangladesh

B.Sc. in Software Engineering

January 2020 – June 2024

Projects

[Shourty](#) - Scalable URL Shortener:

- Designed a distributed architecture using Nginx load balancing and stateless Go replicas to support horizontal scaling and high availability.
- Implemented Distributed ID Generation using Snowflake IDs and Base62 encoding, ensuring unique, time-sortable identifiers without database bottlenecks.
- Optimized latency by integrating a Redis caching layer with TTL eviction, significantly reducing PostgreSQL read load for viral URLs.
- Containerized the full stack (API, Cache, DB, Proxy) using Docker, ensuring environment parity and streamlined multi-node deployment.

Spana – Static Code Metrics Analyzer for C#

- Developed a Roslyn Source Generator tool that automatically computes Cyclomatic Complexity, LOC, DIT, CBO, LCOM, God Methods, and God Classes.
- Delivered per-class and project-wide reports via console output.

SKILLS & OTHER

Programming: C# · Java · GO · JavaScript · Node.js · Python · SQL

Game Engine: Unity, Unreal Engine 4

Backend/Frameworks: .NET 8 · ASP.NET Core · EF Core · Redis · PostgreSQL · Blazor

Tools & Platforms: Docker · Git · Linux

ACHIEVEMENTS

- **Champion**, UI/UX Competition – [IUT National ICT Fest 2024](#)
- **1st Runner-Up**, Project Showcase – [IUT Code Rush 2023](#)
